

INVEST BY STABLEBANK

The Investment Passport to Global Yield

1. Vision

Invest by Stablebank is a unified investment passport that enables individuals and institutions to access the **world's best yield opportunities across traditional finance and decentralized finance in one platform.**

From **U.S. Treasury Bills to tokenized real estate and DeFi vaults**, Stablebank gives investors a **single gateway to diversified yield.**

Mission

Democratize access to global investment opportunities while simplifying capital allocation.

Goal

Provide seamless access to:

- Tokenized Real World Assets (RWA)
- DeFi yield strategies
- Stocks & ETFs
- Bonds and treasuries
- Stablecoin yield markets

All through **one investment passport.**

2. The Problem

Traditional finance and crypto investing remain **fragmented and inefficient**.

Investors face major challenges

Fragmentation

- Crypto yield platforms
- Stock brokerages
- Bond markets
- RWA platforms

All operate separately.

Access Barriers

Many global investors cannot easily access:

- U.S. treasury bills
- global equities
- institutional yield products

Complexity

DeFi requires:

- wallets
- protocol knowledge
- risk management

Lack of Yield Optimization

Most platforms **do not aggregate the best yield opportunities across markets**.

3. The Solution

Invest by Stablebank

A single investment passport giving access to:

Multi-Asset Investment Categories

1. **Tokenized Treasuries**
2. **Global Stocks & ETFs**
3. **Tokenized Bonds**
4. **Stablecoin Yield Vaults**
5. **Real World Assets (RWA)**
6. **DeFi Yield Strategies**

Users can build a **fully diversified portfolio in one app.**

4. Key Investment Categories

1 — Tokenized U.S. Treasuries

Stable and low-risk yield.

Integrations with platforms like:

- Ondo Finance
- OpenEden

Products include:

- Short-term Treasury Bills
 - Yield-bearing tokenized treasuries
 - Institutional treasury vaults
-

2 — Global Stocks & ETFs

Users can invest in:

- U.S. equities
- global ETFs
- fractional shares

Possible integrations:

- tokenized equities
- broker-dealer partners
- regulated custody platforms

Examples include exposure to:

- AAPL
 - NVDA
 - TSLA
-

3 — Tokenized Bonds

Access to corporate and sovereign bond markets through tokenization.

Yield opportunities include:

- emerging market bonds
- corporate debt
- structured credit

Partners could include:

- Securitize
 - Figure Markets
-

4 — Stablecoin Yield Strategies

High-efficiency capital deployment for stablecoins.

Yield sources:

- lending markets
- liquidity pools
- delta-neutral strategies

Protocols could include:

- Aave
 - MakerDAO
 - Curve Finance
-

5 — Institutional Yield Vaults

Curated professional strategies.

Vault managers include:

- Gauntlet
- DeFi hedge funds
- quantitative yield funds

Strategies include:

- automated yield optimization
- liquidity rebalancing
- delta neutral farming

6 — Tokenised Real World Assets

Access to income-generating assets such as:

Real Estate

Rental yield portfolios.

Private Credit

Short-term lending markets.

Commodities

Tokenised gold or energy assets.

Platforms include:

- Centrifuge
- Maple Finance

5. Core Product Features

Investment Passport

One account to access:

- DeFi
- tokenized assets
- traditional markets

Unified Portfolio Dashboard

Track all investments in:

- one wallet
- one portfolio
- one yield tracker

Automated Yield Allocation

Smart portfolio routing to maximise yield.

Institutional Grade Risk Controls

Strategy risk scoring

- liquidity risk
- protocol risk
- smart contract risk
- credit risk

6. Yield Optimisation Engine

Stablebank uses an **AI and analytics engine** that continuously evaluates:

- interest rates
- liquidity
- volatility
- credit risk
- on-chain metrics

The system reallocates capital to the **highest risk-adjusted yield opportunities**.

7. Institutional Product

Stablebank also serves:

Family offices

Crypto funds

corporate treasuries

institutional investors

Services include:

- treasury management
 - stablecoin yield strategies
 - tokenised asset allocations
 - portfolio management tools
-

8. Technology Architecture

Core Components

1. Multi-chain wallet infrastructure
2. Asset tokenization layer
3. Yield strategy aggregator
4. Institutional custody integration
5. Risk analytics engine

Supported Blockchains

- Ethereum
 - Solana
 - Polygon
 - Base
-

9. Revenue Model

Stablebank generates revenue from:

Management Fees

1–2% on managed assets.

Performance Fees

10–20% on strategy profits.

Trading Fees

Stock and tokenised asset trading.

Institutional Services

Treasury management subscriptions.

10. Market Opportunity

The market includes:

Global Wealth Market

Over **\$450 trillion** in assets globally

DeFi Market

Over **\$100B+** in total value locked

Tokenized RWA Market

Projected to reach **\$10 trillion by 2030**

Platforms enabling unified access will capture a **major share of global digital wealth management.**

11. Competitive Advantage

Stablebank differentiates itself through:

Multi-Asset Access

Stocks + Bonds + DeFi + RWA.

Yield Optimization Engine

Automated allocation to best strategies.

Institutional Infrastructure

Built for both retail and institutional users.

Investment Passport Concept

One account to access the world's investments.

12. Roadmap

Phase 1

Stablecoin yield strategies.

Phase 2

Tokenised treasury integration.

Phase 3

Stocks & ETF trading.

Phase 4

Institutional asset tokenisation.

Phase 5

AI-powered wealth management.

13. Long-Term Vision

Stablebank becomes:

The global investment passport for digital finance.

A platform where users can access:

- Global markets
- Real-world assets
- Crypto yield

- institutional strategies

From a single interface.

14. Tagline

Invest Anywhere.

Earn Everywhere.

One Investment passport

> Ondo Finance [Integration Guidelines for Protocols Supporting USDY on Mantle | Ondo Finance](#)

> Openeden <https://docs.openeden.com/usdo/developers/integration-guide>

> Securitize -<https://securitize.io/apis>

> Securitize and DigiFT, we can create a corporate account on their platform, and then issue offerings on the invest@stablebank app, build our smart contract to take funds and deposit on our corporate accounts on those platforms. Anytime we want to take dividends, we can withdraw from a particular offering. Let's take this offering, for example,

> Alpaca for Stocks <https://alpaca.markets>

bEQTY

DigiFT U.S. Equity Income Fund

Target Return

11-15%

Min, investment

\$10,000

Target Return

4-5%

Tokenized estate strat diversified income and U.S. equity income fund managed by BNY Investments that seeks to deliver income and long-term capital growth through a value-driven, dividend-focused approach.

“Once we list on the stablebank app, users who want can subscribe, and the smart contract takes funds and invests in our corporate account on this product (each user we can calculate their APY according to the date our smart contract deposits their funds on our dedicated securitize account)

1. Yield Type

- stablecoin lending APY
- over-collateralized borrowing spreads
- liquidity incentives

Typical yields: **3% – 12%**

Major Integrations

- Aave
- Compound
- Spark Protocol
- Morpho
- Venus Protocol
- Radiant Capital

2. Stablecoin Liquidity & AMM Yield Protocols

These are critical for **stable yield vault strategies**.

Key Integrations

- Curve Finance
- Balancer
- Uniswap
- Convex Finance

- PancakeSwap

Yield Type

- LP trading fees
- token incentives
- boosted staking rewards

Typical yields: **5% – 25%**

3. Institutional Credit & RWA Lending

Major Institutional Protocols

- Maple Finance
- Centrifuge
- Goldfinch
- TrueFi
- Clearpool

Yield Type

- private credit
- trade finance
- structured lending
- institutional borrower pools

Typical yields: 8% – 20%

4. Tokenised Treasury & Bond Yield Platforms

This sector will be **one of the biggest drivers of AUM growth globally.**

Critical Integrations

- Ondo Finance
- OpenEden
- Matrixdock
- Backed Finance
- Franklin Templeton

Yield Type

- short duration T-bill yield
- tokenized money market funds
- sovereign bond exposure

Typical yields: **4% – 7%**

5. Liquid Staking & Crypto Native Yield

Important for diversified portfolios.

Integrations

- Lido Finance
- Rocket Pool

- Marinade Finance
- Jito

Yield Type

- staking rewards
- validator incentives
- MEV yield

Typical yields: **4% – 10%**

6. Structured Yield & Derivatives Protocols

These give hedge-fund-style yield opportunities.

Advanced Integrations

- Ribbon Finance
- Thetanuts Finance
- Lyra Finance
- GMX
- dYdX

Yield Type

- options premium income
- funding rate arbitrage
- delta-neutral strategies

Typical yields: 12% – 35%

7. Emerging High-Growth Yield Ecosystems

(Important for early alpha capture)

- Pendle Finance
- Ethena
- EigenLayer
- Gearbox Protocol

These can generate **very high institutional interest**

8. Emerging High-Growth Yield Ecosystems

(Important for early alpha capture)

- Pendle Finance
- Ethena
- EigenLayer
- Gearbox Protocol

These can generate **very high institutional interest**

9.
